What it means

A positive TB skin test shows that TB germs have entered your body. The next step is to get a **chest x-ray**.

The chest x-ray shows a picture of your lungs, and a doctor can tell if there are any signs of TB disease. TB disease makes you sick and can be spread to others.

Most healthy people **do not** have active TB disease, even if their skin test is positive. However, it is important that you get a chest x-ray to make sure you are not sick.

Where to get a free chest x-ray

Tuberculosis Control Program at
Lanakila Health Center in Kalihi

Address: 1700 Lanakila Avenue,
Honolulu, HI 96817

Location: Ground floor
(use lower parking lot entrance)

Phone: 832-5731

Hours for x-rays at Lanakila

Mon, Tues, Wed, Fri 7:45 AM – 3:00 PM

Thursdays 7:45 AM – 2:00 PM

After the chest x-ray

In about one week after your x-ray, you will receive a letter in the mail from the TB program. The letter will explain your x-ray results and tell you if you need TB medicine. All TB medicine is **free**.

In the future

When you need another TB clearance for school or work, get a chest x-ray, not a skin test.

Do not take another skin test. Once your skin test is positive, you will always test positive in the future.

TB can be cured!

All TB services are free through the TB Program!
